FOCUS PRODUCTS

JANUARY – APRIL

BIG Kaiser Puts the Focus on Your Business and Profitability

We remain dedicated to keeping you productive and profitable by presenting the first edition of 2012 Focus Products Campaign. For the months of January - April, we have turned the focus to 2 common products most likely being used on your shop floor – tool presetters and workholding.

speroni[®] MAGIS & ESPERIA TOOL PRESETTERS

IT'S TIME TO UPGRADE!

Is your current tool presetter nearing the end of its service life? Start the new year off right by upgrading your shop's tool measuring capabilities by swapping your old presetter for credit towards a new state-of-the-art Speroni system.

WHY SPERONI?

Does your current machine....

- ...offer retention knob clamping for additional accuracy and repeatability?
- ...measure runout, nose radius and cutting edge angles automatically?
- ...have tool management for storage of up to 1,000 measuring points?
- ...feature cast iron construction for thermal stability against temperature changes?
- ...feature a "high precision" spindle and spindle disc brake as standard?
- ...have post processing capabilities and editing/additional generation as standard?

Speroni's do - plus so much more!

OUR OFFER

Trade in your old tool presetter – any brand, any model, working or non-working – for a \$2,000 credit towards a new Speroni MAGIS or Esperia model... and we will pay for shipping both ways!

Trading in an older Speroni? We'll give you a \$3,000 credit!

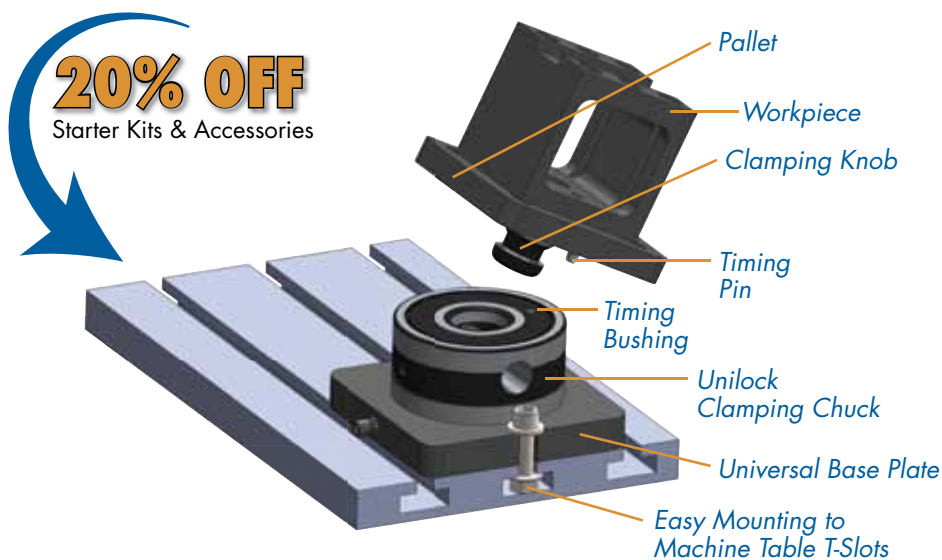

Must mention promo code **PROMO-FPTMS** • Offer good January 1–April 30, 2012
Limit one (1) offer per end user • Installation, training & warranty included
Free shipping of both machines (we choose carrier, continental 48 states only)

UNILOCK® STARTER KITS

INSTANTLY REDUCE SETUP TIME!

Unilock starter kits allow you to plug the components immediately into your production cell, instantly reducing setup time and increasing productivity. The clamping chucks are mounted to universal base plates, allowing them to be directly mounted into the cell for immediate use. Unilock can be used in virtually any process where part changeover time needs to be reduced by quickly and accurately exchanging workpieces in seconds.

These kits are designed for use with small parts and fixtures that can easily be shuttled by hand or robot from one process to another.

ELIGIBLE KITS & ACCESSORIES

Starter Kits

- ASM 90 chuck w/ base plate
- ASM 120 chuck w/ base plate
- ASM 120 manual chuck w/ base plate
